

Nino Khvleuri, Flora Eesebua

Corvinus University of Budapest, Hungary

Within the Erasmus+ Administrative Personnel mobility program, we had the opportunity to participate in the International staff Training Week program organized by the Corvinus University of Budapest, Hungary. The program consisted of interesting and interactive trainings and workshops related to artificial intelligence in the higher education, its opportunities and threats.

We also delivered a presentation for the staff week program participants about the impact of the covid pandemic on students and introduced the latest research outcomes conducted in Georgia, as well as about the opportunities available at the Caucasus University for Psychological support.

As part of the cultural and social events during our visit, we also met the representatives of the administrative and academic teams from several European Universities.

The experience gained within the framework of this Erasmus+ program was crucial both in terms of receiving information about the latest and current issues (artificial intelligence in higher education) and interesting practices, as well as, getting to know the representatives of existing and potential partner Universities.
