ABOUT ME

My name is Tekla and I am an aspiring student at Caucasus school of media, who is constantly engaged in various extracurricular activities and has undying passion for volunteering and community services.

Along with being one of the top students at my school I managed to engage in multiple international projects, organize an international MUN conference in Tbilisi and even had the honor to introduce my draft law at the Parliament of Georgia in front of the human rights committee.

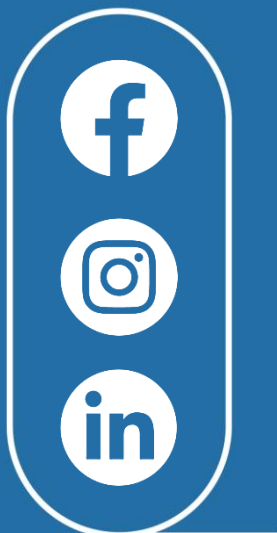

Over the past two years I have continuously engaged in international research programs, one of which was funded by German foreign policy - "MEDIA DIALOGUE", where I proved and demonstrated my competence and was chosen to continue working on my publication in Armenia.

I have won several scientific research competitions the most recent being an inner school contest at Caucasus University where I am getting my degree in public relations and communications.

I was an active member of volunteering club "Volunteer of Georgia" which was functioning in accordance with an international organization "Helping Hand" where together we successfully implemented various projects and helped more than 50 families in immediate need of support.

In my free time, I enjoy reading fictional literature and translating poems. I am an aspiring poet and a novelist who enjoys attending literature gatherings and festivals; That is the very reason I have created my own podcast show "Green Tomatoes" on YouTube, where a co-host of mine and I discuss local and international literary events.

Having a determined mindset and believing there's always a place for improvement has led me to be constantly open to new experiences and challenges that life might bring about.
