

Tengiz Iluridze

Bachelor's program of Computer Science in English

Caucasus School of Technology

Darmstadt University of Applied Sciences, Germany

Participation in Erasmus+ exchange program has been a desire which I've had for quite a while. In the summer semester of 2026, I was blessed with the unique opportunity to study abroad in the Darmstadt University of Applied Sciences (Germany). Where I acquired a completely new and different experience.

Every single day I was given a chance to broaden my knowledge and gain a bigger perspective not only in my studies, but also in my life. The most important part of exchange programs, in my opinion, is meeting new people. Understanding their culture, lifestyle and most importantly creating unforgettable memories. I can say for sure that my circle of friends has expanded by more than thousands of kilometers and as of now, exceeds a few continents.

Darmstadt is a very cozy and small city, which is great for students. Here you'll meet a lot of determined and diligent people from all around the world. Everyone in Darmstadt is very kind, as they help you with everyday problems and make adaptation to a new environment easier.

Studying in university was a very valuable experience. Every lecturer showed utmost professionalism and love for their subject. The studies consist primarily of theoretical and practical parts. I completed very difficult, yet rewarding subjects, which broadened my knowledge deeply and strengthened my interest in Computer Science.

The six months that I've spent on my own have given me meaningful life experience, like the ability to use and allocate my finances in a responsible way, using my time optimally and making decisions independently.

Participating in the Erasmus+ exchange program was the correct choice, as the acquired experience has changed my life and broadened my horizon.
