

Meri Torgvaidze

**Bachelors program in Computer Science in English
Caucasus School of Technologies
Technical University of Sofia, Bulgaria**

Participating in an exchange program had always been my dream, and when Caucasus University gave me the opportunity to join the Erasmus+ program, I knew that an important and exciting semester awaited me.

I spent the last semester at the Technical University of Sofia, where experiencing a different educational system helped me grow professionally and acquire new skills. The variety of courses I attended allowed me to gain new perspectives in my field of study and deepen my knowledge.

This period was not only an academic experience but also a meaningful stage of my personal development. Studying in a foreign country taught me independence, adaptability to a new environment, and gave me greater confidence in my abilities. During these months, I met students of different nationalities, with whom I created lasting memories and took part in diverse activities. Through these interactions, I became familiar with many cultures, which broadened my horizons.

Of course, the semester was not without its challenges—adapting to a new lifestyle and stepping out of my comfort zone was not easy, but it made the experience even more engaging and rewarding.

Taking part in the Erasmus+ program provided me with knowledge and skills that I believe will play a significant role in my career development. This experience showed me that stepping into a different environment is one of the best ways to discover one’s true potential. This semester became one of the most important stages of my student life, and I am deeply grateful both to Caucasus University and the Technical University of Sofia for making it possible.
