

**Maxim lavich**

**Lille Catholic University, France**

As part of the Erasmus + Academic Staff Mobility, I visited Lille Catholic University, where I conducted a module on the following topics: representation of numbers, introduction to cybersecurity, network security, open key cryptography, and introduction to post-quantum cryptography.

Lille Catholic University is indeed a very old, albeit infrastructurally developed educational institution and also has a cyber security lab. As part of the mobility, in addition to lectures, workshops were also planned with local lecturers and researchers, and we talked about future projects and teaching methods available between universities. It is also noteworthy that we have already started working on one of the projects with foreign colleagues. During the mobility, the university additionally provided me with a work room and gave me access to all the resources that the faculty had in the field of cyber security.
